SUMMARY

Innovative Computer Engineering student skilled in AI applications and cybersecurity. Proven ability to build scalable software and optimize systems, backed by competition wins. Proficient in Python, Flutter, and real-time diagnostics, with a passion for solving real-world problems through technology.

EDUCATION

MIT Academy of Engineering	Pune, India
B.Tech In Computer Engineering; GPA: 7.85	September 2024 - June 2027
Pimpri Chinchwad Polytechnic	Pune, India
Diploma in Information Technology; GPA: 9.6	October 2021 – June 2024

WORK EXPERIENCE

KPIT Intern	June 2024- September 2024
- Contributed as a trainee in a dynamic automotive technology environment, gaining hands-on experience in real-time embedded systems and software integration. - Engineered and tested real-time diagnostics and CAN communication modules in an embedded automotive system using C and Python. - Optimized over 500 lines of production code, improving Electronic Control Unit (ECU) response time by 12%. - Collaborated with cross-functional teams across hardware integration, embedded development, and QA, accelerating validation by 15%.	

SKILLS

• Languages:	C, C++, JAVA, Python, SQL, PHP, JavaScript
• Frameworks:	Turtle, Tkinter, Pandas, NumPy, MATLAB, TensorFlow, Matplotlib
• Tools:	Excel, PowerPoint, Tableau, MySQL
• Platforms:	PyCharm, Jupyter Notebook, Visual Studio Code, Eclipse, Android Studio
• Soft Skills:	Leadership, Public Speaking

CERTIFICATES

Android Developer Internship (Google)	September 2025
Cybersecurity Virtual Experience (Mastercard)	July 2025
Generative AI (TATA)	June 2025
Data Science & Analytics (HP)	June 2025
Cyber Security (Deloitte)	May 2025
Python Programming (Microsoft)	February 2025
Python and Flask Framework (Udemy)	December 2024
Core Java Bootcamp (Udemy)	November 2024

ACHIEVEMENTS

5th Place – Odoo Hackathon, Gujarat	August 2025
Secured top 5 position among 19,000+ teams nationwide; earned internship opportunity and ₹8 LPA job offer from Odoo.	
1st Place – DIPEX 2024 (Cybersecurity), Navi Mumbai	March 2024
Won 1st position among 30+ state-level teams for <i>VPN Sneak</i>, a secure Android VPN client using Flutter & OpenVPN.	

PROJECTS

ROI System – Multi-Agent ROI Optimization System

November 2025

- Originated a multi-agent AI-driven ROI optimization system with 6 specialized agents, leveraging ML, RL, and explainable AI to enhance investment decisions.
- Processed over 250 days of real-time financial data across 8+ market symbols and ESG metrics.
- Achieved adaptive ROI strategies enabling dynamic budget allocation, optimizing portfolio risk with metrics like VaR and Sharpe Ratio, and improved strategic decision-making across finance, risk, market forecasting, and sustainability domains.

Tech Stack: [Python, ML, Finance APIs, Prediction Algorithms, Budget Allocation Reporting]

FlexiRent – Rental Management System

August 2025

- Organized a scalable, AI-assisted rental management platform using React, Node.js, and MongoDB to streamline property, tenant, and payment operations.
- Created an elegant, Odoo-inspired UI with real-time rent tracking, automated invoicing, and analytics dashboard.
- Improved operational efficiency by 40% through optimized CRUD workflows and dynamic pricing logic.
- Integrated secure authentication for tenants and shopkeepers, ensuring seamless and responsive user experience.

Tech Stack: [React, Node.js, MongoDB, JavaScript]

FitCoach AI – Fitness & Diet Assistant

July 2025

- Built an AI-driven platform providing personalized workout plans and diet recommendations, leveraging Roboflow API for food image recognition (90%+ accuracy).
- Enhanced a scalable full-stack web app with user authentication, progress tracking, and analytics, supporting 500+ test users.
- Led end-to-end development (80%), including AI integration, backend APIs, and database design, ensuring responsive cross-device usability.

Tech Stack: [Roboflow API, Full-stack web app, Backend APIs, MongoDB]

STOXIGHT – Stock Market Predictor

June 2025

- Designed a real-time stock visualization web-app using Python + Streamlit, analyzing 50+ live stocks and rendering interactive dashboards with Plotly.
- Integrated sentiment analysis using VADER & TextBlob on scraped news data, improving forecast model accuracy by 18%.
- Implemented technical indicators like RSI and moving averages, with a responsive UI deployed locally for demo presentations.

Tech Stack: [Python, Streamlit, Plotly, VADER, TextBlob]

GYANGANJ – TikTok-Style Wikipedia

March 2025

- Developed a mobile-first discovery app using Flutter, enabling TikTok-style scrolling through Wikipedia content with AI-generated audio summaries via Python scripts.
- Implemented real-time tracking of reading time, article popularity, and personalization using Firebase Realtime Database and Cloud Functions.
- Enhanced user engagement through bookmarking, sharing, and trending-topic detection, increasing time-on-app by 22% in test user trials.

Tech Stack: [Flutter, Python, Firebase Realtime Database, Cloud Functions]

VPN Sneak

March 2024

- Built a secure Android VPN client using Flutter and OpenVPN, enabling encrypted tunneling and IP masking for enhanced user privacy.
- Deployed custom VPN servers using Raspberry Pi and ESP-32, simulating real-world secure infrastructure.
- Won 1st Place at DIPEX 2024 (Cybersecurity Category) among 30+ teams; praised for innovation and practicality.

Tech Stack: [Flutter, OpenVPN, Raspberry Pi, ESP-32]
